Volker Grimm is ecological modelling at the Helmholtz Centre for Environmental Research-UFZ and professor for Theoretical Ecology at the University of Potsdam. He significantly contributed to modelling methodology and was involved in the development of more than 80 ecological models, in particular the honeybee colony model BEEHAVE, which explores the effect of multiple stressors. He coordinated the EU-funded project CREAM (2009-2013), which trained a large number of young researchers and formulated first guidance on good modelling practice in the field of ecological risk assessment.
